Weather Summary/Alert:

According to medium range weather forecast of IMD, MC, Bhubaneswar, there is very less chance of rainfall and partly cloudy sky is expected during upcoming week. There is a chance of decrease in temperature is expected in this week as compared to previous week. Decrease in relative humidity along with a wind speed of 5-13 km/h is predicted in north-easterly direction.

General Advisory

- Looking to the cold wave condition, farmers are advised to apply light, protective irrigation to the crops, as moist soil retains heat better than dry soil, which can help raise the temperature around the plants.
- Due to prevailing dry weather along with periodic cloudy and high to moderate humidity condition, there may be a chance of various diseases and sucking insect attack in standing crop so it's regular monitoring should be advised.
- Farmers those are using android mobile should use Meghdoot mobile app for IMD weather forecast and agrometeorological advisory of Odisha in both Odia languages. Damini mobile app for thunderstorm and lightening information and Mausam app for location specific forecast and warning.

SMS Advisory

- Looking to the upcoming dry weather condition, harvesting of matured paddy and non-paddy crops should be advised as soon as possible to avoid further damage due to upcoming extreme weather events.

Crop and livestock Specific Agromet Advisory

Name of the crop	Crop Stage	Agromet Advisories
Kharif Rice	Harvesting/Storage	<ul style="list-style-type: none"> Harvesting of Paddy crop should be advised when 80-85% of the grains are matured. Harvesting should be done either manually by sickle or by using combine harvester or reaper. For safe storage of paddy/rice, use 'Super Grain Bag' which is helpful for retaining the quality, texture, color, aroma and taste for longer period of

		<p>time and also prevents insect pest infestation.</p> <ul style="list-style-type: none"> • Soon after noticing the infestation of the stored grain insect pest, take up fumigation by using Aluminium phosphide (do not use in dwelling houses) tablets @ of 3 tablets/ ton grain (total 9 gm of tablets) in fairly air tight containers or by covering with thick tarpaulin leaving no gaps. The tablets should be wrapped in cotton pouches before placing them in the stacks. All the corners of plastic cover should be plastered with 6-inch-thick layer of mud/ adhesive tapes to prevent leakage of gas. Minimum exposure period is for about 7-10 days.
Rapeseed/ Mustard	Sowing/ Vegetative	<ul style="list-style-type: none"> • Considering the prevailing foggy day condition, farmers are advised to postpone sowing operation for some days. • Thinning of mustard crop should be advised at 15-25 days old crop for better plant growth.
Vegetable crops	Nursery bed preparation / Sowing/ Vegetative	<ul style="list-style-type: none"> • Prepare raised nursery beds to facilitate drainage and intercultural operations and applied well-decomposed farmyard manure (FYM) or compost. • After sowing, cover the seeds with a fine layer of soil and provide light watering using water can. • Cover the beds with dry straw or grass until germination is complete to maintain moisture and temperature, removing the cover immediately after seedling emergence. • Prevailing weather condition is favorable for sucking insect attack in vegetable crops. So regular monitoring should be advised.
Cows and Buffalos		<ul style="list-style-type: none"> • To protect the animal from cold, they should kept inside the sheds during night and provide dry bedding and ensure access to unfrozen water and extra food to generate body heat. • Ensure proper ventilation in animal sheds to manage humidity levels. • Deworm animals and maintain proper hygiene in sheds to reduce susceptibility to diseases during damp condition.

Ms. Jubuli Sahu Junior Agrometeorologist, GKMS, RRTTS, Chiplima	Dr. Sanjukta Mohapatra ADR cum Nodal Officer RRTTS, Chiplima
